

We are looking for a consultant company that has previous experience in:

- a) Applying and getting permits for Photovoltaic parks in the region of Braila and Constanta and
- b) Applying and getting subsidies for the investment.

Before we proceed with any kind of consultancy work we need to understand how much Grant we can get and what is the price that the Electricity Company pays for purchasing our electricity produced from Photovoltaics. Of course, this info has to come from a company that has already experience in these types of Renewable Energy projects.

Then, we will proceed as follows.

- 1.) Assign to a Consulting firm that we feel that they are fully knowledgeable and have the potential to succeed, a project to obtain the relative permits for the production of electricity out of Photovoltaics. For this work, we would usually pay an administration fee of EUR 3,000-5,000 and a success fee of EUR 15,000-25,000.
- 2.) After the electricity production permit is in place, we would then, or in parallel (prior to obtaining the permit for production) assign a project for obtaining the relative Grant. Again, for this work, we would usually pay an administration fee of EUR 3,000-5,000 and a success fee of EUR 15,000-25,000.

That is how we currently work in other countries and this is the preferred way to work in Romania.

If the above procedures, Terms and Conditions are within your business practices, then most probably we would be able to proceed.

If you have any questions please do not hesitate to contact me.

Best regards

John Bethanis
