

Technopolis Thessaloniki, Greece - appreciate help with contacts and collaboration in the area of Energy

We are interested to actually join and develop the park from scratch, which is more than just participate in events. We expect to develop an intelligent city profile in the frameworks of our Science and Technology park. We would be interested to seek for funding from National and European calls for proposals.

My personal expertise in IST projects (since 1997) up to now is in e-business and mobile services, so I will appreciate some help with contacts and collaboration in the area of Energy.

Best regards,

Effie Vlahopoulou
